Quarterly Asset Class Report Tax-Exempt Fixed Income

Canterbury Consulting ("CCI") is an SEC registered Investment Adviser. Information pertaining to CCI's advisory operations, services, and fees is set forth in CCI's current Form ADV Part 2 (Brochure), a copy of which is available upon request and at www.adviserinfo.sec.gov. Information provided through CCI's Quarterly Outlook related to market or asset class performance figures is believed to be derived from reliable sources. However, CCI assumes no responsibility for their content or the manner in which the viewer utilizes such information. The performance information presented in certain charts or tables is for informational purpose only and represents historical performance based on available market data results for the quarterly period shown above and does not reflect any performance related to trading in actual accounts. Any recommendations or statement made in the Quarterly Outlook is not to be construed as specific investment advice. The viewer should be aware of the inherent limitations of data derived from the retroactive application of historical data developed with the benefit of hindsight and that actual results may differ. Actual performance with client accounts would be materially less than the stated performance results for the same period when including the deduction of advisory fees, brokerage or other commissions, and any other expenses that a client would have paid.

September 30, 2024

Canterbury Consulting recommends and communicates asset-class strategy with the objective of constructing a diversified portfolio of fixed income strategies designed to (in aggregate):

- Preserve capital and mitigate volatility
- Provide measured exposure to the diverse universe of fixed income securities
- Exhibit returns uncorrelated to equity markets

- Canterbury fixed income portfolios are set up with a goal to deliver consistent net-of-fees excess returns and moderate tracking error versus the Bloomberg U.S. Aggregate and Bloomberg Global Aggregate.
- Relative to the index, Canterbury’s current fixed income portfolios may exhibit neutral-to-slightly lower duration, similar credit quality, and higher yields.

Market Environment as of September 30, 2024

Fixed Income

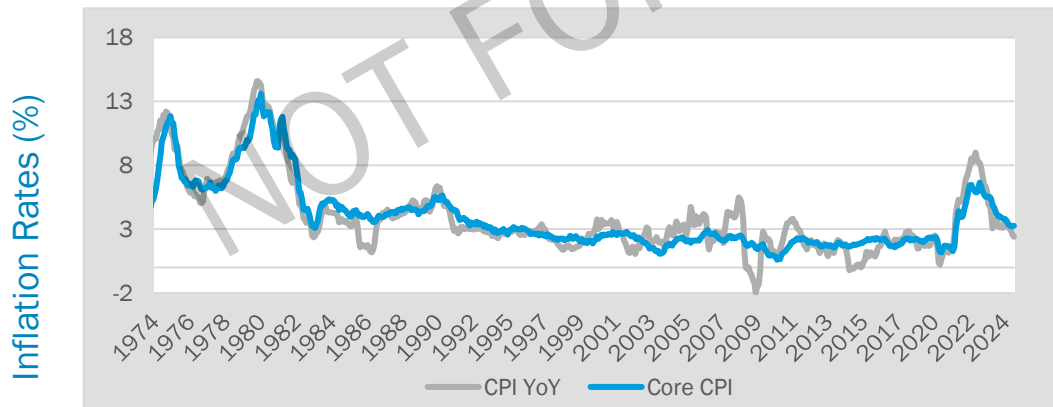

- In the third quarter, the Federal Reserve lowered interest rates to a range between 4.75% to 5.00% as inflation showed signs of cooling and concerns around the labor market weakening.
- During the September FOMC meeting, Powell stated that the risks of achieving employment and inflation goals were more balanced than before, prompting the FOMC to cut interest rates by 50 basis points (bps) instead of the usual 25 bps.
- Powell communicated that inflation had made further progress toward the Fed's 2% inflation target but acknowledged that inflation remained elevated.
- Rates across the yield curve fell during the quarter as the Fed lowered interest rates and signaled that further rate cuts could be on the table for the remainder of the year.
- As rates fell across the curve, the intermediate-to-long-term portion of the Treasury curve generally steepened and de-inverted.
- Investment-grade (IG) and high-yield (HY) spreads tightened over the quarter and continued to remain well below long-term median levels. [1]

Market Environment as of September 30, 2024

Fixed Income

- Front-end breakeven inflation rates fell during the quarter, while long-term breakeven rates remained relatively range-bound around 2%. The breakeven rate is the implied inflation rate for a given maturity and is calculated by subtracting the real yield of a Treasury bond from the nominal yield.
- Breakeven rates currently imply that short-term inflation should trend below the Fed's inflation target of 2%, while intermediate-to-long-term breakevens imply that inflation should run around 2%.
- Real yields from 5-year to 10-year maturities decreased below 2%, likely due to low inflation expectations for the future.
- Inflation continued to be driven by resilient economic growth, tight labor markets, elevated spending within services, and supply/demand imbalances in specific sectors.

Fed Dot Plot
September 2024

Fed Dot Plot
June 2024

Implied Fed Funds Rate
& Rate Hike Probabilities

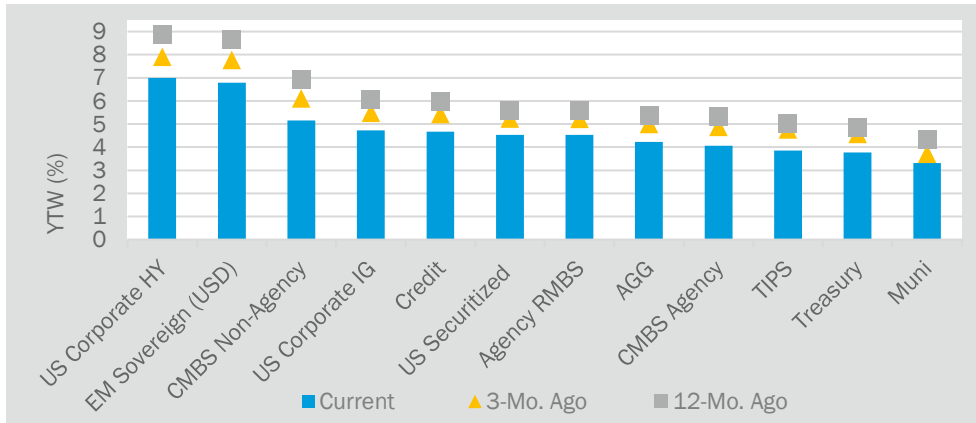

- The June Fed funds rate forecast indicated that there would be approximately one rate cut of 25 basis points by the end of 2024.
- As of the end of September, the Fed's updated dot plot showed an expectation of an additional one to two rate cuts of 25 basis points by the end of 2024.
- Market participants, as represented by Fed funds futures rates, showed an expectation of two to three rate cuts of 25 bps by the end of the year.
- The Fed Dot Plot represents where each of the Federal Open Market Committee (FOMC) members believes the Fed funds rate will be in the future.
- The implied Fed funds rate is where market participants believe the Fed funds rate will be based on futures prices.

Market Environment as of September 30, 2024

Fixed Income

Domestic Yields

Developed Yields (Local Currency)

EM Yields (Local Currency)

- Yields across various U.S. fixed income sectors fell during the quarter as the Fed cut interest rates and forecasted further rate cuts through the remainder of the year and into next year.
- Global developed market yields decreased as many central banks moved towards a rate-cutting cycle. Japan remains the outlier, as elevated inflation prompted its central bank to raise rates.
- Emerging markets (EM) sovereign yields experienced volatile intra-quarter movements but ultimately ended the quarter relatively flat compared to the last quarter. Brazil was an outlier as sovereign yields rose due to higher inflation, leading the central bank to raise rates. Colombia was another outlier, with sovereign yields falling amid cooling inflation trends.

Goals

- *Are clients seeking to preserve capital, generate total return, or blend the two within a fixed income segment?*
- *What level of risk related to portfolio correlation is the client looking to incur?*

Interest Rate & Inflationary Environment

- *How does the current interest rate regime and inflationary environment affect return and risk (i.e. stagnant, slow-rise, rapid rise)?*
- *What level of interest rate volatility is the client willing to take?*

Risk Tolerance

- *How much risk is a client willing to take?*
- *Duration, yield curve positioning, sector exposure, credit exposure, the correlation to equities, and the client's distribution flows are important factors to measure.*

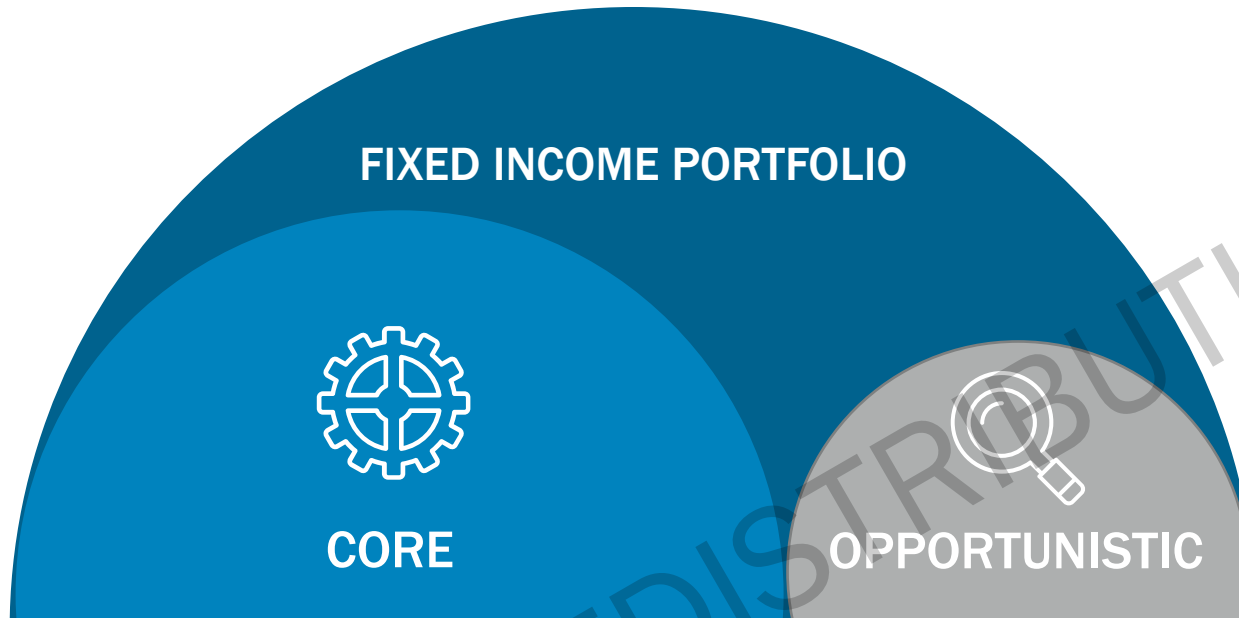

Tax Considerations

- *Is the client's status taxable or tax-exempt?*
- *Does the client have a higher threshold given the respective tax situation?*

Time Horizon

- *Does the client have short term or long term goals?*
- *Are spending requirements quarterly, annually, or longer?*
- *Is spending consistent with the return/risk profile of the portfolio?*

Characteristics

- Low volatility
- Uncorrelated to equities
- U.S. Focus

Exposure

- Treasuries
- Agencies
- Investment grade corporate
- MBS

Characteristics

- Income orientated
- Total return focus
- Uncorrelated to core bonds

Exposure

- Non-U.S. developed sovereigns
- EM sovereigns
- High yield
- Bank loans
- Private debt
