Quarterly Asset Class Report Real Assets

Canterbury Consulting ("CCI") is an SEC registered Investment Adviser. Information pertaining to CCI's advisory operations, services, and fees is set forth in CCI's current Form ADV Part 2 (Brochure), a copy of which is available upon request and at www.adviserinfo.sec.gov. Information provided through CCI's Quarterly Outlook related to market or asset class performance figures is believed to be derived from reliable sources. However, CCI assumes no responsibility for their content or the manner in which the viewer utilizes such information. The performance information presented in certain charts or tables is for informational purpose only and represents historical performance based on available market data results for the quarterly period shown above and does not reflect any performance related to trading in actual accounts. Any recommendations or statement made in the Quarterly Outlook is not to be construed as specific investment advice. The viewer should be aware of the inherent limitations of data derived from the retroactive application of historical data developed with the benefit of hindsight and that actual results may differ. Actual performance with client accounts would be materially less than the stated performance results for the same period when including the deduction of advisory fees, brokerage or other commissions, and any other expenses that a client would have paid.

Canterbury Consulting recommends and communicates asset-class strategy with the objective of constructing a diversified portfolio of real asset strategies designed to (in aggregate):

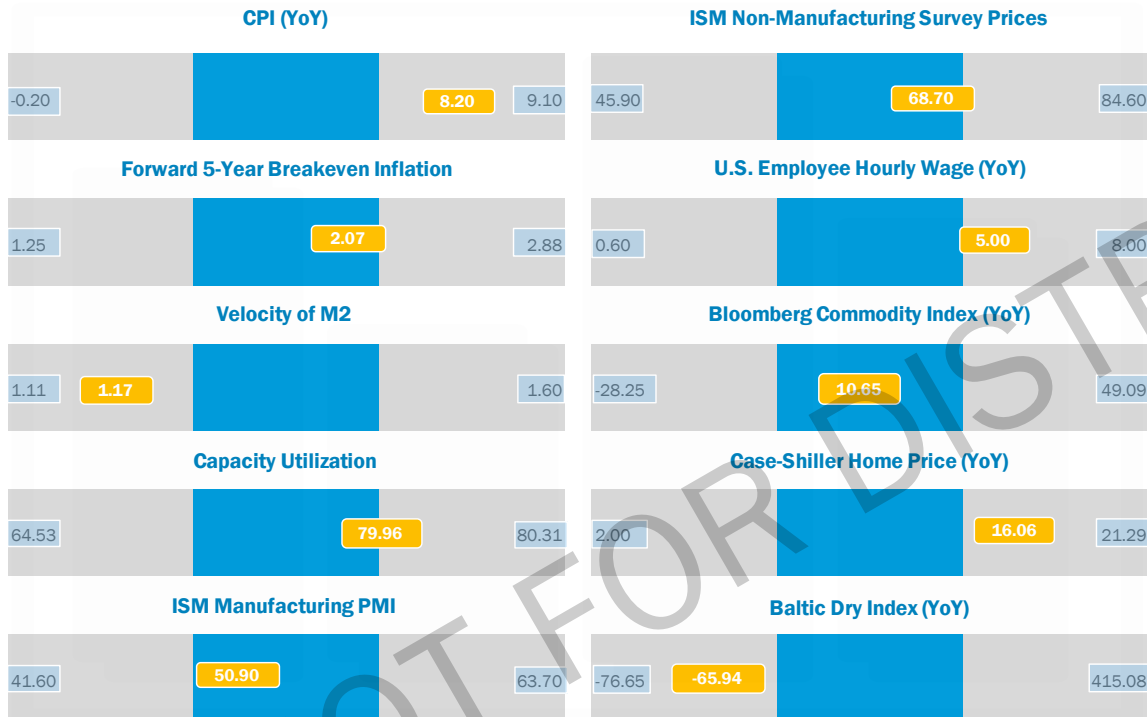

- Preserve purchasing power
- Generate uncorrelated returns to other asset classes
- Manage the volatility profile of the segment

- Real assets are appropriate for investors with long time horizons (10+ years) and inflation-linked liabilities.
- Real asset portfolios should aim to maximize high inflation sensitivity and high inflation reliability, while limiting volatility.
- Portfolio allocations will differ depending on the client’s risk tolerance.

Asset Class Indicators

Real Assets

- Canterbury monitors several inflation and real asset indicators to help detect imbalances that are expected to cause price pressures.
- Inflation, measured by CPI, remained persistently elevated over the quarter, reaching a high of 8.2%. CPI excluding food and energy, generally viewed as sticky inflation or Core CPI, increased by 6.6% year-over-year (YoY) for the month of September.
- Indicators used to measure U.S. economic activity such as the ISM Manufacturing and Non-Manufacturing indexes, declined over the quarter. As a result, concerns of a slowing economy increased.
- Mortgage rates reached record highs, causing housing demand to slow. Nevertheless, housing prices, represented by the Case-Shiller Home Price Index, remained high.

Market Environment as of September 30, 2022

Real Assets

- Breakeven inflation rates on the short end of the curve decreased while long-term breakeven rates remained relatively stable between 2.0% – 2.5%. The breakeven rate is the implied inflation rate for a given maturity and is calculated by subtracting the real yield of a treasury bond from the nominal yield.
- Short-term break even rates largely decreased over the quarter given the rapid rise in the fed funds rate and expectations of slower economic growth.
- Current long-term breakeven rates imply that inflation should trend above the Fed’s original inflation target of 2% in the long run.
- Intermediate and long-term real yields increased and have surpassed the levels seen 5 years ago.
- Inflation is being driven by supply/demand imbalances, the Ukraine/Russia war, a tight labor market, high wage growth, and various supply chain disruptions across the globe.

Source: Bloomberg, FRED, CPI & PCE Data, U.S. Breakeven Rates, U.S. Treasury Inflation-Indexed Rates. Data as of 9/30/2022.

- Inflation Reliability (% of time asset is positive when inflation is positive)
- Inflation Sensitivity (rate of change, i.e. how many units an asset moves given a 1 unit change in inflation)

- Risk-adjusted returns of the remaining asset classes are used to help optimize real asset portfolios
